Installation

- **Dependencies:**
- `mise-en-place` **:** https://mise.jdx.dev/installing-mise.html
- **Install** `git-project-factory` **globally with** `mise-en-place` **:**

```
mise use -g gitlab:RadianDevCore/tools/git-project-factory@latest
```

Usage

- **Use** `git-project-factory` **in empty or existing project folder :**

```
git project-factory
```

- **Interactive** `git-project-factory` **menu :**
- Select wished features and actions (in order)
- Configure interactive user inputs
- Approve git patches to commit automatically
- **Update already configured features automatically :**

```
git project-factory --auto
```

- **Show the command to run the same jobs again when finished :**

```
git project-factory --hint
```

- **Accept all git patches automatically, without interactive reviews :**

```
git project-factory --yes
```

- **Show** `git-project-factory` **options and jobs :**

```
git project-factory --help
```

Updates

- **Show** `git-project-factory` **version :**

```
git project-factory --version
```

- **Update `git-project-factory` to the latest release :**

```
git project-factory --update
```

- **Upgrade `git-project-factory` dependencies (`mise-en-place` tools) :**

```
git project-factory --upgrade
```

- **Update `git-project-factory` with all other `mise-en-place` tools :**

```
mise upgrade
```

Development

- **Use `git-project-factory` from sources with `mise-en-place` :**

```
{
  git clone https://gitlab.com/RadianDevCore/tools/git-project-factory.git
  cd ./git-project-factory/
  mise install
  mise use -g "gitlab:RadianDevCore/tools/git-project-factory@path:${PWD}"
}
```

- **Restore `git-project-factory` latest release :**

```
mise use -g gitlab:RadianDevCore/tools/git-project-factory@latest
```

- **Update `git-project-factory` sources :**

```
git project-factory --update
```
